

NETIO PowerBOX 3Px

NETIO PowerBOX 3Px is a power socket device with 3 outputs controlled over a LAN. Each output can be switched off and on over the web, the NETIO cloud service, or with a mobile app.

Open API enables integration into 3rd party systems using a wide range of protocols (http JSON, Modbus/TCP, SNMP, MQTT, Telnet, ...).

- 3x output (electrical socket)
- Each output can be switched on and off
- LAN (Ethernet)

- Open API (10 protocols, M2M API)
- ZVS – Zero Voltage Switching
- Service: NETIO Cloud

Each of the three power sockets can be independently controlled from the product web interface (switched off/on or power-cycled). To switch the outputs on in a sequence, a power-up delay interval can be configured for each output.

The **NETIO Mobile2** app controls each output individually over LAN (local network) or NETIO Cloud.

NETIO Cloud is a SSL-secured service for controlling the outputs from anywhere (Web or Cloud API).

Open API allows controlling the outputs over the network using various protocols (http XML/JSON, Modbus/TCP, MQTT, SNMP, Telnet and more...).

AV drivers make it easy to connect NETIO sockets to professional Audio/Video systems such as Neets, Crestron, Control4 and more.

The Scheduler function switches outputs on and off at configured times. It works locally, even without Internet connection.

FEATURES

- 3x output (electrical socket)
 - Each output can be switched on / off
 - Methods for controlling each output
 - WEB browser
 - Mobile App (NETIO Mobile 2)
 - Open API (7 protocols)
 - NETIO Cloud
-
- **NETIO Mobile2:** Mobile app
 - **NETIO Cloud:** Paid service
-
- **ZVS** (Zero Voltage Switching): The relay is switched when the voltage crosses zero. This reduces relay wear and allows switching devices with a high inrush current.
 - **PowerUp State:** Default output state (On/Off/Last state)
 - **PowerUp Delay:** Delay before switching the output on
 - **IOC** (Independent Output Control) – output state is unaffected by firmware update
 - **Scheduler function:** Each output can be switched according to its time schedule (calendar)

-
- **Open API (protocols)**
 - JSON over http
 - Modbus/TCP
 - MQTT-flex
 - Telnet
 - SNMP (SNMP V1/v3)
 - XML over http
 - URL API – http get

-
- Supported protocols: http, DNS, NTP, uPNP, DHCP, SNMP, MQTT, ICMP, Modbus/TCP

SUPPORT FOR USERS AND DEVELOPERS

- **NETIO Wiki** – library for developers
- **ANxx** (Application Notes) with examples
- **NETIO Drivers** – for AV systems
